The backflow assembly testers above have submitted to the City of Monroe verification of their credentials as backflow assembly testers and are registered with the Washington State Department of Health (DOH). Washington State Department of Health regulations require anyone who inspects, tests, and/or monitors backflow prevention assemblies to pass the state's certification examination and hold a valid certificate. Having your backflow assembly tested annually by a certified backflow assembly tester is required by State and City regulations. Everyone plays an important role in keeping the public drinking water system safe. Thank you to our water customers and backflow assembly testers for helping keep our drinking water safe and Clean!
